Changes Implemented

The CSS page was created as an external stylesheet called styling.css. The stylesheet was linked to all the HTML pages of the Sweet Crumbs Bakery website so that the same design and styling could be applied consistently across the entire website.

1. **CSS Reset**
   A CSS reset was added to remove the default margins and padding from HTML elements. The box-sizing property was also set to border-box to make it easier to control the size of elements and maintain a consistent layout across different browsers.

2. **Base Website Styling**
   The overall website was given a consistent font family, font size, line height, text colour and background colour. A cream background and dark brown text were used to create a warm bakery-style appearance.

3. **Typography**
   Different heading sizes were created for h1, h2 and h3. Font weight and letter spacing were also adjusted to make headings more noticeable. Paragraphs were given suitable font sizes and line spacing to improve readability.

4. **Header Styling**
   The header was given a dark brown background, white text and centred content. Padding was added to create more space around the bakery name and tagline.

5. **Navigation Menu**
   Flexbox was used to arrange the navigation links horizontally. The links were centred and given spacing between them. The navigation links were also styled with white text and bold lettering.

6. **Navigation Interactions**
   hover, focus and active pseudo-classes were added to the navigation links. These effects allow the links to change appearance when the user moves the mouse over them, selects them using the keyboard, or clicks them.

7. **Main Content Layout**
   The main section was given a maximum width and centred on the page. Padding was added to create space around the content and make the pages easier to read.

8. **Section Spacing**
   Space was added between different sections of the website using margins. This prevents the content from appearing crowded and creates a cleaner layout.

9. **Image Styling**
   Images were set to a maximum width of 100% so that they do not extend outside their containers. The height was set to adjust automatically so that images maintain their proportions.

10. **Product Grid**
    CSS Grid was used to organise the bakery products into columns. The product cards are displayed in a structured grid with equal spacing between them.

11. **Product Cards**
    Each product was placed inside a card with a white background, border, rounded corners, padding and a box shadow. This makes the products stand out from the background.

12. **Product Hover Effect**
    A hover effect was added to the product cards. When the user moves the mouse over a product, the box shadow becomes more noticeable, creating an interactive effect.

13. **Links**
    Website links were given a specific brown colour. Hover, focus and active effects were added to make links easier to identify and interact with.

14. **Forms**
    The enquiry form was styled with a white background, border, rounded corners, padding and a box shadow. This makes the form look separate from the rest of the page.

15. **Form Fields**
    Text boxes, select boxes and text areas were given consistent widths, padding, borders, font sizes and rounded corners.

16. **Form Focus Effects**
    A focus effect was added to form fields. When a user clicks or selects a form field, the border and outline change to make it clear which field is currently being used.

17. **Buttons**
    Submit and reset buttons were styled with a dark brown background, white text, padding and rounded corners. A hover effect was added so the buttons change colour when the user moves the mouse over them.

18. **Table Styling**
    Tables were given a full width, collapsed borders and consistent padding. Table headings were given a dark brown background with white text to make them easier to distinguish from the rest of the table.

19. **Footer Styling**
    The footer was given a dark brown background, white text, centred content and padding. This creates a clear ending to each webpage and keeps the footer consistent across the website.

20. **Responsive Design**
    Media queries were added to make the website responsive. On smaller screens, the navigation changes from a horizontal layout to a vertical layout, while the product grid changes from three columns to two columns and eventually one column on mobile devices.

Changelog – The Sweet Crumbs Bakery Website

Version 3.0 | CSS and JavaScript Development

This changelog outlines the changes and improvements made to the CSS and JavaScript sections of The Sweet Slice Bakery website.

1. CSS Changelog

The CSS was developed to improve the appearance, layout and responsiveness of the website.

1. Colour Scheme

- Updated the website colours to cream, chocolate brown and caramel.
- Applied consistent colours to headings, buttons, backgrounds and navigation.

2. Navigation Bar

- Styled the navigation bar to make it neat and easy to use.
- Added hover effects to navigation links.

3. Homepage Design

- Improved the homepage layout using images, headings and buttons.
- Added spacing and alignment to make the content more attractive.

4. Shop Page

- Styled product cards to display bakery products neatly.
- Added hover effects to product images and buttons.
- Used a grid layout to organise products.

5. Our Story Page

- Improved the layout of the About Us content.
- Styled headings, paragraphs and images for better readability.

6. Contact Page

- Styled contact details and enquiry form.
- Improved the appearance of input fields and submit buttons.

7. Gallery Page

- Created a grid layout to display bakery images.
- Added image hover effects.

8. Responsive Design

- Added media queries to make the website work on desktops, tablets and mobile phones.
- Adjusted layouts, images and navigation for different screen sizes.

2. JavaScript Changelog

JavaScript was added to make the website more interactive and improve its functionality..

1. Shopping Cart

- Added an Add to Cart function for bakery products.
- Added a cart counter to show the total number of items.
- Used local storage to keep cart information after refreshing the page.

2. Product Search

- Added a search feature to help customers find products by name.
- Products that do not match the search are hidden.

3. Contact Form Validation

- Added validation to check that required fields are completed.
- Checked whether the email address is entered in the correct format.
- Displayed a confirmation message after successful validation.

4. Gallery Functionality

- Added click functionality to gallery images.
- Images open in a new browser tab when clicked.

5. Back-to-Top Button

- Added a button that allows users to return to the top of the page smoothly.

6. Console Message

- Added a console message to confirm that the JavaScript file is running.

3. Overall Improvements

The CSS and JavaScript updates improved the overall design and functionality of The Sweet Crumbs Bakery website. CSS made the website more attractive, organised and responsive, while JavaScript introduced interactive features that make it easier for customers to browse products and interact with the website.

Note: The shopping cart currently stores items in the browser but does not support online payments. The contact form validates information but does not send messages to a real email address.
