

Website Project Proposal 2: BrightPath Community Centre

1. Organisation Overview

Name: BrightPath Community Centre

BrightPath Community Centre is a fictional non-profit organisation established in 2019 to support young people and unemployed adults in the local community. The centre provides basic computer training, career guidance, educational resources and community development programmes. It was established to help community members develop practical skills that can improve their educational and employment opportunities.

The mission of BrightPath Community Centre is to empower community members by providing accessible education, digital skills training and support services.

The vision is to create a community where young people and adults have access to the knowledge, skills and resources needed to build better futures.

The target audience includes unemployed young adults, school leavers, students, job seekers and community members who want to improve their digital and career-related skills. The website will also provide information for parents, volunteers, sponsors and organisations interested in supporting the centre.

2. Website Goals and Objectives

The main goal of the website is to create an accessible online platform where community members can learn about BrightPath Community Centre and the services it provides.

The website objectives are to:

- Provide information about the organisation.
- Advertise training programmes and community events.
- Provide information about educational resources.
- Provide contact and location information.
- Encourage volunteers to become involved.
- Attract potential sponsors and community partners.
- Increase awareness of the organisation.

The main KPIs will include website visitors, programme enquiries, volunteer enquiries, event registrations and the number of visitors accessing programme information.

3. Current Website Analysis

BrightPath Community Centre currently does not have a dedicated website. Information about the organisation is mainly communicated through posters, community announcements and social media.

This creates a weakness because people who are unfamiliar with the organisation may struggle to find detailed information about its programmes and services.

The proposed website will provide one central source of information. It will allow visitors to learn about the organisation, programmes, upcoming events, contact details and opportunities to volunteer or provide support.

4. Proposed Website Features and Functionality

The website will include:

- **Homepage:** Introduce BrightPath and highlight important announcements.
- **About Us:** Explain the organisation's history, mission and vision.
- **Programmes:** Display available computer training, career and educational programmes.
- **Events:** Display upcoming workshops and community events.
- **Resources:** Provide information about useful educational and career resources.
- **Volunteer:** Explain how visitors can become volunteers.
- **Contact Us:** Provide contact details, location and an enquiry form.
- **Navigation Menu:** Provide simple links between all major sections.

The HTML version will focus on organising the information clearly. CSS and JavaScript can be added during later project stages to improve the appearance and functionality.

5. Design and User Experience

Colour Scheme blue, light blue, white

The proposed colour palette will use dark and green. Blue represents trust and professionalism, while green can represent growth, opportunity and community development.

Typography

The website will use Arial or another clear sans-serif font. Main headings will be larger and bold, while subheadings will be slightly smaller. Normal paragraphs will use a readable font size to make information easy to access.

Layout and Design

The website will use a clean and structured layout. The header will contain the organisation's name and navigation menu. The main area will contain information about programmes and services. The footer will contain contact information and other useful links.

User Experience

The website will be designed for users with different levels of computer literacy. Navigation links will have clear names such as "Home", "About Us", "Programmes", "Events" and "Contact". Content will be divided into short sections to make it easier to read.

The website will also use descriptive headings and alternative text for images to improve accessibility.

6. Technical Requirements

The website will initially be created using **HTML5 only**. HTML will provide the structure for the different pages and content.

During later stages, **CSS** will be introduced for visual design and responsive layouts, while **JavaScript** will be used where interactive features are required.

The proposed domain name is:

www.brightpathcommunity.co.za

A .co.za domain is suitable because the organisation operates in South Africa. Current market research shows that .co.za domains can cost approximately R89–R150 per year depending on the provider and pricing plan.

Shared hosting would be suitable because the organisation's website is expected to have relatively low to moderate traffic.

7. Timeline and Milestones

Week Milestone

Week 1 Research the organisation and target audience

Week 2 Complete proposal and website requirements

Week 3 Design low-fidelity wireframes

Week 4 Develop HTML structure

Week 5 Apply CSS styling

Week 6 Add JavaScript functionality

Week 7 Perform usability and functionality testing

Week 8 Correct identified problems

Week 9 Final documentation and submission

The exact dates should be updated according to the official assignment submission schedule supplied by the lecturer.

8. Budget

The estimated budget for the BrightPath Community Centre website is:

Item	Estimated Cost
Domain name (.co.za)	R120 per year
Basic hosting	R1,200 per year
Website development	R5,000 once-off
Website maintenance	R200 per month
SSL certificate	R0 if included with hosting

Estimated first-year total R8,720

The estimated costs are based on current South African website development, domain and hosting price ranges. Simple professional websites can cost several thousand rand to develop, while domain and hosting costs depend on the selected provider and package.

As BrightPath is a non-profit organisation, the development cost could potentially be reduced if the website is developed by students, volunteers or community members.
