

Website Project Proposal 1: Sweet Crumbs Bakery

1. Organisation Overview

Name: Sweet Crumbs Bakery

Sweet Crumbs Bakery is a fictional small business established in 2021 by a local baker who wanted to provide fresh and affordable baked products to the surrounding community. The business started as a small home-based bakery and later expanded into a physical shop. Sweet Crumbs Bakery specialises in freshly baked bread, cakes, cupcakes, pastries, biscuits and customised cakes for special occasions.

The mission of Sweet Crumbs Bakery is to provide customers with fresh, high-quality and affordable baked products while offering friendly and reliable customer service.

The vision is to become a trusted local bakery known for quality products, creative cake designs and excellent customer service.

The target audience includes residents, families, students, employees and customers looking for baked products for birthdays, weddings, celebrations and other events. The website will also target people who use the internet to search for local bakeries before deciding where to purchase their products.

2. Website Goals and Objectives

The main goal of the website is to create a professional online presence for Sweet Crumbs Bakery and make important business information easily accessible to customers.

The website objectives are to:

- Introduce customers to the bakery and its history.
- Display available products and services.
- Provide prices or product information where appropriate.
- Provide opening hours and contact information.
- Encourage customers to make enquiries and place orders.
- Increase awareness of the bakery in the local community.
- Make it easier for potential customers to find the business online.

The main key performance indicators (KPIs) will include website visitors, product enquiries, customer orders generated through the website, contact form submissions and returning visitors.

3. Current Website Analysis

Sweet Crumbs Bakery does not currently have a dedicated website. The business mainly relies on word-of-mouth recommendations and social media to communicate with customers. Although social media is useful for advertising products, customers do not have one central location where they can find all the important information about the bakery.

The proposed website will address this weakness by providing organised information about the bakery, products, opening hours, contact details and ordering information.

4. Proposed Website Features and Functionality

The website will contain the following main features:

- **Homepage:** Introduce Sweet Crumbs Bakery and highlight popular products.
- **About Us:** Provide the history, mission and vision of the bakery.
- **Products/Services:** Display bread, cakes, cupcakes, pastries and customised cakes.
- **Gallery:** Display photographs of selected bakery products.
- **Contact Us:** Provide the bakery's phone number, email address and location.
- **Opening Hours:** Display the days and times when the bakery operates.
- **Order/Enquiry Form:** Allow customers to submit basic enquiries or cake requests.
- **Navigation Menu:** Allow users to move easily between the main website sections.

During the HTML stage, these features will mainly provide structured information and links. CSS and JavaScript can be introduced in later stages to improve the visual appearance and add additional functionality.

5. Design and User Experience

Colour Scheme

The proposed colour palette will use cream, light brown, soft pink and dark brown. These colours are suitable for a bakery because they create a warm, welcoming and food-related appearance.

Typography

The website will use Arial or a similar easy-to-read sans-serif font for the main content. Headings will use larger and bolder text to create a clear hierarchy between headings, subheadings and paragraphs.

Layout and Design

The website will follow a simple and organised layout. The header will contain the bakery name and navigation links. The main content area will contain information, product descriptions and images, while the footer will contain contact information and copyright details.

User Experience

The navigation will be kept simple so that users can reach important information within a few clicks. Headings will clearly identify sections, while consistent page structure will make the website easier to understand. Images will include appropriate alternative text to improve accessibility.

6. Technical Requirements

The website will initially be developed using HTML5 only because HTML provides the basic structure and content of the website.

For the later stages of the project, CSS will be used for styling and responsive design, while JavaScript can be used for interactive functionality.

The proposed domain name is:

www.sweetcrumbsbakery.co.za

A .co.za domain is appropriate because the bakery is a South African local business. Current South African pricing indicates that a .co.za domain generally costs around R89–R150 per year.

The website can use shared web hosting because a small bakery website is not expected to require a large amount of server resources.

7. Timeline and Milestones

Week Milestone

Week 1 Select organisation and complete research

Week 2 Complete website proposal and planning

Week 3 Create low-fidelity wireframes

Week 4 Develop HTML website structure

Week 5 Add CSS styling and branding

Week 6 Add JavaScript functionality

Week 7 Test links, forms, navigation and responsiveness

Week 8 Make corrections and complete documentation

Week 9 Final website review and submission

The timeline can be adjusted to match the official submission dates provided by the lecturer.

8. Budget

The estimated budget for the Sweet Crumbs Bakery website is:

Item	Estimated Cost
Domain name (.co.za)	R120 per year
Basic hosting	R1,200 per year
Website development	R5,000 once-off

Item	Estimated Cost
Website maintenance	R300 per month
SSL certificate	R0 if included with hosting

Estimated first-year total R9,920

The budget is an estimate based on typical South African website costs. Current market information places simple professional business websites at approximately R5,000–R16,000, while basic hosting and domain costs vary according to the provider.
