

3.1 Content Research and Sourcing

For this website project, I selected Sweet Crumbs Bakery as the target organisation. Sweet Crumbs Bakery is a fictional small bakery created specifically for this project. Although the organisation is fictional, realistic research was conducted to ensure that the website content represents the type of information that would normally be found on a professional bakery website.

Organisation Website Research

Because Sweet Crumbs Bakery is a fictional organisation, it does not have an existing official website. Instead, I researched existing South African bakery websites to understand how real bakeries present their products, services and business information online.

For example, YEAST Artisan Bakery provides information about products such as sourdough bread, ciabatta, cakes, cupcakes, doughnuts and pastries. The bakery also provides information about its locations and ways customers can place orders. This helped me identify the type of products and information that should be included on the Sweet Crumbs Bakery website (YEAST Artisan Bakery, 2026).

BakeryCo, a bakery based in Limpopo, was also researched. Its website provides information about cakes, cupcakes, ordering, delivery and trading hours. The website also demonstrates how a bakery can use its online presence to promote its products and encourage customers to place orders (BakeryCo, 2026).

The information obtained from these websites was used only as a source of ideas. The organisation name, history, mission, vision, products, contact details and other information for Sweet Crumbs Bakery were created specifically for this project.

Social Media Research

Since Sweet Crumbs Bakery is fictional, it does not have existing social media profiles. However, social media was considered when planning the type of content that a modern bakery would normally publish.

The proposed social media content would include photographs of freshly baked products, customised cakes, special offers, new products, customer celebrations and announcements. Social media links can be added to the website during the later stages of development.

Public Domain and Creative Commons Resources

Images are important for a bakery website because they help customers understand the products being offered. Free image resources were researched to identify suitable bakery photographs.

Unsplash contains a large collection of bakery-related photographs, including bread, cakes, pastries and bakery interiors. Some older Unsplash images available through Wikimedia Commons are also identified as being released under the CC0 public-domain dedication.

For the final website, images will be selected carefully according to their licence conditions. The source and creator of any externally sourced image will be recorded in the project documentation where required.

Original Content

Original content will be created for Sweet Crumbs Bakery to make the website suitable for the fictional client. This includes:

- The bakery's history.
- Mission and vision statements.
- Product descriptions.
- Product categories.
- Opening hours.
- Contact information.
- Two fictional bakery locations.
- Customer enquiry information.
- Website headings and page descriptions.
- Calls to action such as "Explore Our Products" and "Make an Enquiry".

The product descriptions will be written specifically for the website rather than copied from another bakery. This will make the content unique to Sweet Crumbs Bakery while still reflecting realistic bakery products and services.
